1.1 Manual's purpose

- This manual contains the instructions needed to carry out proper use and maintenance of the engine, therefore it must always be available, for future reference when required.
- This manual is an integral part of the engine, in the event of transfer or sale, it must be attached to it.
- Safety pictograms can be found on the engine and it is the operator’s responsibility to keep them in a perfectly visible place and replace them when they are no longer legible.
- Information, description and pictures in this manual reflect the state of the art at the time of the marketing of engine.
- However, development on the engines is continuous. Therefore, the information within this manual is subject to change without notice and without obligation.
- KOHLER reserves the right to make, at any time, changes in the engines for technical or commercial reasons.
- These changes do not require KOHLER to intervene on the marketed production up to that time and not to consider this manual as inappropriate.
- Any additional section that KOHLER will deem necessary to supply some time after the main text shall be kept together with the manual and considered as an integral part of it.
- The information contained within this manual is the sole property of KOHLER. As such, no reproduction or replication in whole or part is allowed without the express written permission of KOHLER.

1.2 Glossary and Definitions

The paragraphs, tables and figure are divided into chapter with their progressive numbers.

Ex: Par. 2.3 - chapter 2 paragraph 3.
Tab 3.4 - chapter 3 table 4.
Fig. 5.5 - chapter 5 figure 5.

The references of the objects described in the text and in figure and number are indicated by letters, which are always and only related to the paragraph you are reading unless there are specific references to other figures or paragraphs.

NOTE: All data, measurements and relevant symbols are shown in the glossary section.

1.3 Emission-Related Installation Instructions

Failing to follow the instructions in the applications guidebook when installing a certified engine in a piece of nonroad equipment violates federal law (40 CFR 1068.105(b)), subject to fines or other penalties as described in the Clean Air Act.

OEM must apply a separate label with the following statement: “ULTRA LOW SULFUR FUEL ONLY” near the fuel inlet.

Ensure you are installing an engine appropriately certified for your application. Constant speed engines may only be installed on constant speed equipment for constant speed operation.

If you install the engine in a way that makes the engine’s emission control information label hard to read during normal engine maintenance, you must place a duplicate label on the equipment, as described in 40 CFR 1068.105.

1.4 Service request

- The complete and updated list of authorized Kohler Co. service centers can be found on websites: www.kohlerengines.com & www.lombardingroup.it/dealer-locator.
- If you have any questions regarding your warranty rights and responsibilities or the location of the nearest Kohler Co. authorized service location, you should contact Kohler Co. at 1-800-544-2444 or access our website at www.kohlerengines.com (USA and North American).

2.3 Engine dimensions (mm)

- 515
- 79.15
- 756.4
2.4 Oil

**Important**
- The engine may be damaged if operated with improper oil level.
- Do not exceed the MAX level because a sudden increase in engine rpm could be caused by its combustion.
- Use only the recommended oil to ensure adequate protection, efficiency and service life of the engine.
- The use of lubricants other than recommended may shorten the engine life.
- Viscosity must be appropriate to the ambient temperature to which the engine is to be exposed (Par. 2.4.1).

**Danger**
- Prolonged skin contact with the exhausted engine oil can cause cancer of the skin.
- If contact with oil cannot be avoided, thoroughly wash your hands with soap and water as soon as possible.
- For the exhausted oil disposal, refer to Par. 6.6 DISPOSAL and SCRAPPING.

### 2.4.1 SAE oil classification

- In the SAE classification, oils are identified according to viscosity without considering any other qualitative characteristic.
- The code is made up of two numbers. The first number refers to the viscosity when cold, for use during winter ("W" = winter), while the second number is for viscosity at high temperatures.

### RECOMMENDED OIL

<table>

</tr>
</tbody>
</table>

2.5 Fuel

**Important**
- Use the same type of diesel fuel as used in cars (EN 590 for E.U. - ASTM D975 regulation - S 15 for U.S). Use of other types of fuel could damage the engine. Do not use dirty diesel fuel or mixtures of diesel fuel and water since this will cause serious engine faults.
- Any failures resulting from the use of fuels other than recommended will not be warranted.

**Warning**
- Clean fuel prevents the fuel injectors from clogging. Immediately clean up any spillage during refuelling.
- Never store diesel fuel in galvanized containers (i.e. coated with zinc). Diesel fuel and the galvanized coating react chemically to each other, producing flaking that quickly clogs filters or causes fuel pump and/or injector failure.

### 2.5.1 Fuel for low temperatures

- When operating the engine in ambient temperatures lower than 0 degrees C, use suitable low temperature fuel normally available from fuel distributors and corresponding to the specifications of Tab. 2.3.
- These fuels reduce the formation of paraffin in diesel at low temperatures.
- When paraffin forms in the diesel, the fuel filter becomes blocked interrupting the flow of fuel.
2.5.2 **Biodiesel fuel**

- Fuels containing 10% methyl ester or B10, are suitable for use in this engine provided that they meet the specifications listed in the Tab. 2.3.
- **DO NOT USE** vegetable oil as a biofuel for this engine.

### 2.3 FUEL COMPATIBILITY

<table>
<thead>
<tr>
<th>Fuel Type</th>
<th>Compatible</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN 590, DIN 51628 - Military NATO Fuel F-54 (S=10 ppm)</td>

</tr>
<tr>
<td>Bio Fuels (EN14214)</td>
<td>no</td>
</tr>
<tr>
<td>ARCTIC (EN 590/ASTM D 975)</td>
<td>no</td>
</tr>
<tr>
<td>No 1 Diesel (US) - ASTM D 975 - Grade 1-D S 15 (S=15 ppm)</td>
<td>yes</td>
</tr>
<tr>
<td>No 1 Diesel (US) - ASTM D 975 - Grade 1-D S 500 (S=500 ppm)</td>
<td>yes</td>
</tr>
<tr>
<td>No 2 Diesel (US) - ASTM D 975 - Grade 2-D S 15</td>
<td>yes</td>
</tr>
<tr>
<td>No 2 Diesel (US) - ASTM D 975 - Grade 2-D S 1500</td>
<td>yes</td>
</tr>
<tr>
<td>High sulfur fuel S &lt; 2000 ppm (&lt;0.2%)</td>
<td>yes</td>
</tr>
</tbody>
</table>

**Warning**

- Fuels that are approved for use but have some limitation: JP5, JetA, AVTUR (JetA1), JaP-8
- It is possible to use JP5, JetA, AVTUR (JetA1) e JP-8 with the following prescription due to low lubricity and high sulfur content of these fuels:

**Important**

- Add LUBRICITY DOSER to fuel line inlet
- Oil change interval every 125 hours
- Lost of warranty on fuel injection equipment (injection pump, rail and injectors)
- Lost of 10% of power performance due to low density of these fuels

**Important**

- Fuels that are absolutely not allowed:
- JP-4 e JetB are not allowed due to lack of lubricity and low density.

2.5.3 **Emission-Related Installation Instructions**

Failing to follow the instructions in the applications guidebook when installing a certified engine in a piece of nonroad equipment violates federal law (40 CFR 1068.105(b)), subject to fines or other penalties as described in the Clean Air Act. OEM must apply a separate label with the following statement: “ULTRA LOW SULFUR FUEL ONLY” near the fuel inlet. Ensure you are installing an engine appropriately certified for your application. Constant speed engines may only be installed on constant speed equipment for constant speed operation.

If you install the engine in a way that makes the engine’s emission control information label hard to read during normal engine maintenance, you must place a duplicate label on the equipment, as described in 40 CFR 1068.105.

</tbody>
</table>
3.1 Safety information

- The intended use of the engine is in conformity with the machine on which it is mounted.
- Any use of the machine other than that described cannot be considered as complying with its intended purpose as specified by KOHLER.
- KOHLER declines all responsibility for any change to the engine not described in this manual made by unauthorized KOHLER personnel.
- A proper use of the engine, a strict observance of the rules listed below and the rigorous application of all these precautions will avoid the risk of accidents or injuries.
- Those who carry out the use and maintenance on the engine must wear the safety equipment and the accident-prevention guards.
- KOHLER declines all direct and indirect liability for failure to comply with the standards of conduct contained in this manual.
- KOHLER cannot consider every reasonably unforeseeable misuse that may cause a potential danger.

3.2 General remarks

3.2.1 Note for OEM

- When installing the KDI engines, always bear in mind that any variation to the functional systems may result in serious failures to the engine.
- Any improvement must be verified at KOHLER testing laboratories before application of the engine.
- In case the approval to a modification is not granted, KOHLER shall not be deemed responsible for any consequential failures or damages to the engine.
- The engine may only be assembled on a machine by personnel specifically trained by KOHLER and who work in compliance with the existing documentation.
- The engine has been built to the specifications of a machine manufacturer, and it is his responsibility to ensure that all necessary action is taken to meet the essential and legally prescribed health and safety requirements. Any use of the machine other than that described cannot be considered as complying with its intended purpose as specified by KOHLER, which therefore declines all responsibility for accidents caused by such operations.

3.2.2 Note for end user

- The following indications are dedicated to the user of the machine in order to reduce or eliminate risks concerning engine operation and the relative routine maintenance work.
- The user must read these instructions carefully. Failure to do this could lead to serious danger for his personal safety and health and that of any persons who may be in the vicinity of the machine.
- On starting, make sure that the engine is as horizontal as possible, unless the machine specifications differ.
- Make sure that the machine is stable to prevent the risk of overturning.
- The engine must not operate in places containing inflammable materials, in explosive atmospheres, where there is dust that can easily catch fire unless specific, adequate and clearly indicated precautions have been taken and have been certified for the machine.
- To prevent fire hazards, always keep the machine at least one meter from buildings or from other machinery.
- Children and animals must be kept at a due distance from operating machines in order to prevent hazards deriving from their operation.
- Thoroughly wash and clean all the external parts of the engine before performing any operation, in order to avoid the accidental introduction of impurities/foreign bodies. Use only water and/or appropriate products to clean the engine. If cleaning engine with a pressure washer or steam cleaner, it is important to maintain a minimum distance of at least 200mm between the surfaces to be washed and the nozzle. Avoid directing the nozzle on electrical components, cable connections and sealed rings (oil seals etc).
- Fuel and oil are inflammable. The tank must only be filled when the engine is off. Before starting, dry any spilt fuel.
- Make sure that no soundproofing panels and the ground or floor on which the machine is standing have not soaked up any fuel.
- Fuel vapour is highly toxic. Only refuel outdoors or in a well ventilated place.
- Do not smoke or use open flames when refuelling.
- During operation, the surface of the engine can become dangerously hot. Avoid touching the exhaust system in particular.
- Before proceeding with any operation on the engine, stop it and allow it to cool.
- Always open the radiator plug or expansion chamber with the utmost caution, wearing protective garments and goggles.
- The coolant fluid is under pressure. Never carry out any inspections until the engine has cooled.
- If there is an electric fan, do not approach the engine when it is still hot as the fan could also start operating when the engine is at a standstill.
Important

- The oil must be drained whilst the engine is hot. Particular care is required to prevent burns. Do not allow oil to come into contact with the skin because of the health hazards involved. It is recommended to use an oil intake pump.
- During operations that involve access to moving parts of the engine and/or removal of rotating guards, disconnect and insulate the negative wire (-) of the battery to prevent accidental short-circuits and to stop the starter motor from being energized.
- Check belt tension only when the engine is off.
- Fully tighten the tank cap each time after refuelling. Do not fill the tank right to the top but leave an adequate space for the fuel to expand.
- To start the engine follow the specific instructions provided in the engine and/or machine operating manual. Do not use auxiliary starting devices not originally installed on the machine (e.g. Startpilot).
- Before starting, remove any tools that were used to service the engine and/or machine. Make sure that all guards have been refitted.
- Do not mix fuel with elements such as oil or kerosene. Failure to comply with this prohibition will cause the non-operation of the catalyst and non-observance of the emissions declared by KOHLER.
- Pay attention to the temperature of the oil filter when the filter itself is replaced.
- Only check, top up and change the coolant fluid when the engine is off and reached the ambient temperature. Coolant fluid is polluting, it must therefore be disposed of in the correct way.

Important

- Do not use air and water jets at high pressures on cables, connectors and injectors.
- Only use the eyebolts A installed by KOHLER to move the engine (Fig. 3.1).
- The angle between each lifting chain and the eyebolts shall not exceed 15° inwards.
- The correct tightening of the lifting screws is 25Nm.
- Do not interpose spacers or washers between the eyebolts and engine head.
- Provided that the above requirements are met, if the lifting eyebolts are subject to permanent deformation (inwards), all subsequent lifting operations must be performed in order to prevent them from bending in the opposite direction.
3.3 Safety signal description

- To ensure safe operation please read the following statements and understand their meaning.
- Also refer to your equipment manufacturer’s manual for other important safety information.

- This manual contains safety precautions which are explained below.
- Please read them carefully.

3.3.1 Adhesive safety plates

The following is a list of the adhesive safety plates that may be found on the engine, which indicate potential points of danger to the operator.

- Read the Operation and Maintenance handbook before performing any operation on the engine.
- Use protective gloves before carrying out the operation.
- Hot Parts. Danger of burns.
- Use protective glasses before carrying out the operation.
- Presence of rotating parts. Danger of jamming or cutting.
- Use sound absorbing protections before carrying out the operation.
- Presence of explosive fuel. Danger of fire or explosion.
- Presence of steam and pressurized coolant. Danger of burns.
- Lifting point.
- Electrical shock. Danger of severe scalding or death.
- High pressure fluid. Danger of fluid penetration.
- Lethal Exhaust Gases. Danger of poisoning or death.

3.3.2 Safety guards

Hereunder is a list of safety guards that must be worn prior to carrying out any type of operation and to avoid potential harm to the operator.

- Use protective gloves before carrying out the operation.
- Use protective glasses before carrying out the operation.
- Use sound absorbing protections before carrying out the operation.

3.3.3 Warnings

Hereunder is a list of safety warnings that may be found in the manual, which advise you to pay attention when carrying out particular procedures that may be potentially dangerous to the operator or things.

- Danger
  - This indicates situations of grave danger which, if ignored, may seriously threaten the health and safety of individuals.

- Important
  - This indicates particularly important technical information that should not be ignored.

- Warning
  - This indicates that failure to comply with it can cause minor damage or injury.
3.4 Information and safety signals

### ACCIDENTAL START

**Accidental Starts can cause severe injury or death.**

Before working on the engine or equipment, disconnect the battery negative (-) wire.

### HOT PARTS

**Hot Parts can cause severe burns.**

Engine components can get extremely hot from operation. Do not touch engine while operating or just after stopping. Never operate the engine with heat shields or guards removed.

### ROTATING PARTS

**Rotating Parts can cause severe injury.**

Stay away while engine is in operation. Keep hands, feet, hair, and clothing away from all moving parts to prevent injury. Never operate the engine with covers, shrouds, or guards removed.

### LETHAL EXHAUST GASES

**Carbon Monoxide can cause severe nausea, fainting or death.**

Avoid inhaling exhaust fumes and never run the engine in a closed building or confined area. Carbon monoxide is toxic, odorless, colorless, and can cause death if inhaled.

### ELECTRICAL SHOCK

**Electrical Shock can cause injury.**

Do not touch wires while engine is running.

### HIGH PRESSURE FLUID RISK OF PUNCTURE

**High Pressure Fluids can puncture skin and cause severe injury or death.**

Do not work on fuel system without proper training or safety equipment. Fluid puncture injuries are highly toxic and hazardous. If an injury occurs, seek immediate medical attention.

### EXPLOSIVE FUEL

**Explosive fuel can cause fires and severe burns.**

Fuel is flammable and its vapours can ignite. Store fuel only in approved containers, in well ventilated, unoccupied buildings. Do not fill the fuel tank while the engine is hot or running, since spilled fuel could ignite if it comes in contact with hot parts or sparks from ignition. Do not start the engine near spilled fuel. Never use fuel as a cleaning agent.

### EXPLOSIVE GAS

**Explosive Gas can cause fires and severe acid burns.**

Charge battery only in a well ventilated area. Keep sparks, open flames, and other sources of ignition away from the battery at all times. Batteries produce explosive hydrogen gas while being charged. Keep batteries out of the reach of children. Remove all jewelry when servicing batteries. Before disconnecting the negative (-) ground cable, make sure all switches are OFF. If ON, a spark will occur at the ground cable terminal which could cause an explosion.

### LEthal EXHAUST Gases

**Carbon Monoxide can cause severe nausea, fainting or death.**

Avoid inhaling exhaust fumes and never run the engine in a closed building or confined area. Carbon monoxide is toxic, odorless, colorless, and can cause death if inhaled.

### CALIFORNIA WARNING - DECLARATION 65

Engine exhaust from this product contains chemicals known to the State of California to cause cancer, birth defects, or other reproductive harm.

3.5 Safety and environmental impact

Every organisation has a duty to implement procedures to identify, assess and monitor the influence of its own activities (products, services, etc.) on the environment.

Procedures for identifying the extent of the impact on the environment must consider the following factors:

- Liquid waste.
- Waste management.
- Soil contamination.
- Atmospheric emission.
- Use of raw materials and natural resources.
- Regulations and directives regarding environmental impact.

In order to minimise the impact on the environment, KOHLER now provides a number of indications to be followed by all persons handling the engine, for any reason, during its expected lifetime.

- All components and fluids must be disposed of in accordance with the laws of the country in which disposal is taking place.
- Keep the fuel and engine control systems and the exhaust pipes in efficient working order to limit environmental and noise pollution.
- When discontinuing use of the engine, select all components according to their chemical characteristics and dispose of them separately.
4.1 Pre-start check

Important

• Read carefully the following pages and carry out the operations described below in accordance with the instructions specified.
• Non compliance with the operations described in the following pages involves the risk of damages to the engine and vehicle on which it is installed as well as personal and/or property damage.
• Increase the frequency of maintenance operations in heavy working conditions (engine starts but stops, very dusty and hot environments, etc...).

4.2 Running-in period

NOTE: For the first 50 hours of engine operation, it is advisable not to exceed 75% of the maximum power supplied.

4.3 Starting and turning off

4.3.1 Starting

1. Check the level of the engine oil, fuel and coolant and fill if necessary (Par. 4.5 and Par. 4.6).
2. Put the ignition key in the ignition switch (if supplied).
3. Turn the key to ON position.
4. Turn the key beyond the ON position and release it when the engine starts (the key will return into ON position automatically).

Important

• Do not actuate the starter for more than 15 seconds at a time. If the engine does not start, wait for one minute before repeating attempt.
  • If engine does not start after two attempts see Tab. 7.1 and Tab. 7.2 to locate the cause.

4.3.2 After starting

Warning

• Make sure that all the warning lights on the control panel are off when the engine is running.
• Run at minimum speed for a few minutes according to table (except constant speed engine).

<table>
<thead>
<tr>
<th>AMBIENT TEMPERATURE</th>
<th>TIME</th>
</tr>
</thead>
<tbody>
<tr>
<td>≤ -20°C</td>
<td>2 minutes</td>
</tr>
<tr>
<td>from -20°C to -10°C</td>
<td>1 minutes</td>
</tr>
<tr>
<td>from -10°C to -5°C</td>
<td>30 seconds</td>
</tr>
<tr>
<td>from -5°C to 5°C</td>
<td>20 seconds</td>
</tr>
<tr>
<td>≥ 5°C</td>
<td>15 seconds</td>
</tr>
</tbody>
</table>

4.3.3 Turning off

1. Do not turn off the engine when it is running at the maximum rotation speed (except constant speed engine).
2. Before turning it off, keep it idle at minimum speed for about 1 minute.
3. Turn the key to OFF position.
4.4 Refuelling

**Important**
- Before proceeding with operation, read **Par. 3.2.2**.

**Danger**
- Fill the engine off.
- The only approved fuels are those listed in **Tab. 2.3**.
- In those countries where diesel has a high sulphur content, it is advisable to lubricate the engine with a high alkaline oil or alternatively to replace the lubricating oil recommended by KOHLER more frequently.
- To avoid explosions or fire outbreaks, do not smoke or use open flames during the operations.
- Fuel vapours are highly toxic. Only carry out the operations outdoors or in a well ventilated place.
- Keep your face well away from the fuel fill to prevent harmful vapours from being inhaled.
- Dispose of fuel in the correct way and do not litter as it is highly polluting.
- When refuelling, it is advisable to use a funnel to prevent fuel from spilling out. The fuel should also be filtered to prevent dust or dirt from entering the tank.
- Do not overfill the fuel tank. Leave room for the fuel to expand.

**NOTE:** At the first fuelling or if the tank was empty filling the fuel system (**Par. 6.3 point 8**).

4.5 Oil filling

**Important**
- For safety precautions see **Par. 2.4**.
- Before proceeding with operation, read **Par. 3.2.2**.

1. Loosen the oil filler cap A or the oil filler cap C if the cap A is not accessible.
2. Add the type oil recommended (**Tab. 2.1** and **Tab. 2.2**).
3. Remove the oil dipstick B and check that the level is up to but does not exceed the MAX.
4. If level is not at the MAX level, add additional oil.
5. Re-tighten the cap A or C.

**Important**
- Do not exceed the MAX level on the dipstick.
- Do not use the engine with the oil level below the MIN.

**4.6 Coolant filling**

---

**Important**

- Before proceeding with operation, read Par. 3.2.2.
- Place engine on horizontal surface to ensure accurate measurement of filling.

**Warning**

- An anti-freeze protection liquid (ANTIFREEZE) - mixed with decalcified water - must be used.
- The freezing point of the refrigerant mixture depends on the amount concentration in water.
- As well as lowering the freezing point, the antifreeze also raises the boiling point.
- A 50% mixture is recommended to ensure a general level at protection prevents the formation of rust, galvanic currents and calcium deposits (Tab. 2.4).

---

**NOTE:** Before proceeding with any operation on the engine, stop it and allow it to cool.

---

**Warning**

- Presence of steam pressurized coolant danger of burns.

1. Loosen the cap A and fill the cooled exhaust manifold B with coolant (Tab. 2.4).

2. Loosen the screw C release any air and tighten the screw C (Tightening torque of 8 Nm - Fig. 4.5).

**NOTE:** The MAX filling level for exhaust manifold B is in correspondence of capscrew C, complete the coolant refilling procedure as soon as the coolant starts leaking out of capscrew C (Fig. 4.5).

3. Re-tighten the cap A, C.

4. After a few minutes of operation, stop the engine and allow the liquid to cool returns to a ambient temperature and check the coolant level again.
5.1 Useful information about maintenance

• This chapter shows all operations described in the Tab. 5.1 and Tab. 5.2 if you have the skills appropriate may be directly carried out by the user.
• Periodic inspection and maintenance operations must be carried out as indicated in this manual and are the responsibility of the user.
• Failure to comply with these service and maintenance intervals increases the risk of technical damage to the engine. Any non compliance makes the warranty become null and void.
• In order to prevent personal and property damage read carefully the instructions listed below before proceeding with any operation of the engine.

5.2 Periodic maintenance

The intervals of preventive maintenance in Tab. 5.1 and Tab. 5.2 refer to the engine operating under normal operating conditions with fuel and oil meeting the recommended specifications.

</table>

1. In case of low use: 12 months.
2. The period of time that must elapse before checking depends on the environment in which the engine operates. Cleaned and replace more frequently under very dusty conditions.
3. In case of low use: 36 months.
4. In case of low use: 24 months.
6. The operation must be carried out by authorized KOHLER workshops or skilled personnel.
7. The replacement interval is only an indication, it strongly depends from environmental condition and hose status detected during regular visual inspection.
8. The first check must be done after 10 hours.
5.3 Oil level check

1. Loosen the oil filler cap A. Remove the oil dipstick B and check that the level is up to MAX.

2. Pour in recommended oil until reaching the MAX level mark.

3. Reinstall the oil dipstick B completely.

4. Re-tighten the cap A and/or C (Fig. 5.2).

**Important**

- Do not exceed the MAX level on the dipstick.
- Do not use the engine with the oil level below the MIN.

5.4 Air filter check

**NOTE:** Refer to the technical documentation of the vehicle.
5.5 Rubber hoses check

The check is carried out by exerting a slight deflection or bending along the pipe and near the hose clamps.

Components must be replaced if they have clear signs of cracks, tears, cuts, leaks and do not retain a certain degree of elasticity.

- If hoses are damaged contact an authorized KOHLER workshop.

1. Check that the:
   - Fuel system hoses A are intact.
   - Cooling circuit hoses B1, B2, B3, and B4.
   - Vent system pipes C.
5.6 Coolant level check

**NOTE:** Before proceeding with any operation on the engine, stop it and allow it to cool.

**Important**
- Place engine on horizontal surface to ensure accurate measurement of checking.

**Warning**
- Presence of steam pressurized coolant danger of burns.

1. Start the engine without cap A on the cooled exhaust manifold B.

2. Undo capscrew C and refill the cooled exhaust manifold B until coolant leaks out of capscrew C.

**NOTE:** The MAX filling level for exhaust manifold B is in correspondence of capscrew C, complete the coolant refilling procedure as soon as the coolant starts leaking out of capscrew C.

3. Reinstall the cap A and capscrew C.

**NOTE:** For coolant filling see Par. 4.6.

**Warning**
- Before starting make sure that the radiator cap and cap, if present, are installed correctly to avoid spillage of liquid or vapour at high temperatures.
5.7 Zinc anode and radiator check

**Warning**

- Protect the starter motor adequately against contact with liquids before starting operations.

1. Undo capscrew B.

2. Replace component B if value C is below 15 mm.

3. Slightly undo union A to drain the coolant into an appropriate container and refer to Par. 3.5.

4. Undo capscrew D1, D2 and remove cap E1, E2.

5. Remove radiator F from cooled manifold G.

6. Perform cleaning operations, immerse components F, E1, and E2 in a solution of distilled water with 10% hydrochloric acid at a temperature of 50°C.

7. Make sure that radiator F is free from deposits and dirt of any kind.

8. Make sure that all the holes in surfaces F1, F2 are free from deposits and dirt of any kind.

**NOTE:** If the inside of the pipes on surfaces F1 and F2 (Fig. 5.7) are clogged with deposits even after having been cleaned as per step 6, the pipes must be cleaned using specific mechanical tools.

**Important**

- Replace all the gaskets.

9. Insert gasket H3 in radiator F.

10. Insert radiator F all the way into manifold G.

11. Insert gasket H4 in radiator F.

12. Fasten cap E1 onto manifold G using capscrews D1 (tightening torque: MIN 5 Nm, MAX 7.5 Nm).

13. Fasten cap E2 onto manifold G using capscrews D2, inserting flange E3 and also inserting:
   - gasket H1 between E2 and E3
   - gasket H2 between E3 and G.
   - (tightening torque: MIN 5 Nm, MAX 7.5 Nm)
14. Clamp capscrew B on cap E1, inserting gasket H5 (tightening torque 30 Nm).

15. Screw union A onto manifold G.

16. Perform the operations described in Par. 4.6.
5.9 Alternator belt check

NOTE: Refer to the technical documentation of the vehicle.

5.10 Fuel filter cartridge check

When turn on lights on control water filter cartridge fuel:

1. Gently loosen the wing screw A without removing it.
2. Drain the water if present.
3. Re-tighten the wing screw A as soon as the fuel begins to flow.
5.11 Product preservation

Important

• If the engines are not to be used for 6 months, they must be protected by carrying out the operations described in Engine storage (up to 6 months) (Par. 5.12).
• If the engine is still not in use after the first 6 months, it is necessary to carry out a further operation to extend the protection period (more than 6 months) (Par. 5.13).
• If the engine is not to be used for an extended period, the protective treatment procedure must be repeated within 24 months of the previous one.

5.12 Engine storage up to 6 months

Before storing the engine check that:

• The environments are not humid or exposed to bad weather. Cover the engine with a proper protective sheet against dampness and atmospheric contaminants.
• The place is not near electric panel.
• Avoid storing the engine in direct contact with the ground.

5.13 Engine storage over 6 months

Follow the steps described in Par. 5.12.

1. Engine oil replacement (Par. 6.1).

2. Refuel with fuel additives for long storage. The following additives are recommended: DEFA Fluid Plus (Pakelo Lubricants), Diesel Treatment (Green Star), Top Diesel (Bardhal), STP® Diesel Fuel Injector Treatment.

3. With expansion tank: make sure that the coolant is up to the maximum level.

4. Without expansion tank: Top liquid up until the pipes inside the radiator are covered by about 5 mm. Do not overfill the radiator, but leave room for the coolant to expand.

5. Start the engine and keep it idle at minimum speed for 2 minutes.

6. Bring the engine to 3/4 of the maximum speed for 5÷10 minutes.

7. Turn off the engine.

8. Completely empty the fuel tank.

9. Spray SAE 10W-40 on the exhaust and intake manifolds.

10. Seal the exhaust and intake ducts to prevent foreign bodies from entering.

11. When cleaning the engine, if using a pressure washer or steam cleaning device, avoid directing the nozzle on electrical components, cable connections and sealed rings (oil seals etc). If cleaning engine with a pressure washer or steam cleaner, it is important to maintain a minimum distance of at least 200mm between the surface to be washed and the nozzle - avoiding absolutely electrical components such as alternators, starter motors and engine control units (ECU).

12. Treat non-painted parts with protective products.

If the engine protection is performed according to the suggestions indicated no corrosion damage should occur.

5.14 Engine starting after storage

1. Remove the protective sheet.

2. Use a cloth soaked in degreasing product to remove the protective treatment from the external parts.

3. Inject lubricating oil (no more than 2 cm3) into the intake ducts.

4. Refill the tank with fresh fuel.

5. Make sure that the oil and the coolant are up to the maximum level.

6. Start the engine and keep it idle at minimum speed for a two about minutes.

7. Bring the engine to 75% of maximum rated speed for 5 to 10 minute.

8. Stop the engine while the oil is still hot (Par. 6.1), discharge the protective oil in a suitable container.

Warning

• Over time, lubricants and filters lose their properties, so it is important consider whether they need replacing, also based on the criteria described in Tab. 5.2.

9. Replace the filters (air, oil, fuel) with original spare parts.

10. Pour new oil (Par. 4.5) up to the maximum level.

11. Empty the cooling circuit completely and pour in the new coolant up to the maximum level (Par. 4.6).
**Danger**

- Disconnect the negative wire (-) from the battery to avoid accidental engine starting.

**Important**

- Before proceeding with operation, read Par. 3.3.2.

---

### 6.1 Engine oil replacement

**Important**

- Place engine on level surface to ensure accurate measurement of oil level.
- Before proceeding, perform the operation described in Par. 6.2 - Point 1.

**NOTE:** Perform this operation with warm engine, to get a better fluidity of the oil and get a full discharge of oil and impurities contained in it.

1. Loosen the oil filler cap A (Fig. 6.1).
2. Remove the oil dipstick B.
3. Remove the oil drain plug D and the gasket E (the oil drain plug is on both sides of the oil sump).
4. Drain oil in an appropriate container. (For the exhausted oil disposal, refer to Par. 6.6 DISPOSAL and SCRAPPING).
5. Replace gasket E.
6. Tighten the drain oil plug D (tightening torque at 35 Nm).
7. Perform the operations from point 2 to 5 of Par. 6.2.
8. Add the type of oil recommended (Tab. 2.1 and Tab. 2.2).
9. If the plug A is not accessible, use the oil filler cap C.

**Important**

- Do not exceed the MAX level on the dipstick.
- Do not use the engine with the oil level below the MIN.

10. Fit and remove the oil dipstick B to check the level. Pour in fluid until reaching the MAX level mark.
11. Upon completion, reinstall the oil dipstick B completely.
12. Tighten the cap A or C.
WARNING

- Oil filter cartridge replacement (Par. 6.2) and fuel filter replacement (Par. 6.4)
- In case of low use replace it 12 months.
- For disposal of oil filter cartridge and fuel filter refer to Par. 6.6 DISPOSAL and SCRAPPING.

6.2 Oil filter cartridge replacement

**Important**
- Electric/pneumatic screwdrivers are forbidden.

1. Unscrew cartridge holder cover A by performing three complete turns and wait 1 minute.

**NOTE:** This operation allows to oil contained in the support F to flow into the oil sump in the correct way.

2. Unscrew cartridge holder cover A and check that the oil in the lub. oil filter support F has flowed towards the oil sump.

3. Remove the cap A as well as the oil cartridge B from the oil filter support.

4. Remove and replace the oil cartridge B with a new one. Remove and replace the gaskets C, D and E with new ones.

5. Fit and tighten the cover A on the oil filter support F, tightening it with a torque wrench (tightening torque of 25 Nm).
6.3 Fuel filter cartridge replacement

**NOTE:** The fuel filter is situated on the crankcase of the engine or it may be assembled on the frame of the vehicle.

1. Disconnect the cable A of the water presence sensor C.
2. Remove the water presence sensor C from its cartridge B.
3. Loosen the cartridge B using the appropriate wrench.
4. Lubricate the gasket D of the new cartridge B.

**Important**

- Do not fill the new cartridge B with fuel.

5. Tighten the new empty cartridge B (Fig. 6.9) on the diesel fuel filter support E using the special wrench (tightening torque of 17 Nm).
6. Tighten the water presence sensor C on the new cartridge B (tightening torque of 5 Nm).
7. Reconnect the cable A of the water presence sensor C.

**NOTE:** Bleeding.

8. Push repeatedly the button G in order to fill the circuit.

6.4 Air filter cartridge replacement

**NOTE:** Refer to the technical documentation of the vehicle.
6.5 Coolant replacement

1. Perform the operation described in Par. 5.7.

6.6 Water pump impeller replacement

1. Loosen capscrews A and remove cover B.
2. Remove impeller C from pump body D.
3. Grease the new impeller C.
4. Insert the new impeller C onto shaft E.
5. Fasten cover B with capscrews A and insert gasket G between cover B and pump body D.

6.7 Disposal and scrapping

- In case of scrapping, the engine shall be disposed of in appropriate locations, in conformity with the law in force.
- Before scrapping, it is necessary to separate the rubber or plastic parts from the rest of the components.
- The parts only composed of plastic material, aluminium and steel can be recycled if collected by the appropriate centers.
- Waste oil must properly be recycled and disposed of in the correct way to safeguard the environment. According to the laws in force, it is classified as hazardous waste, therefore it must be collected by the appropriate centers.
### 7.1 Useful information about failures

- This chapter contains information about the problems that may appear during engine operation with its causes and troubleshooting Tab. 7.2.
- In some cases, you shall turn off the engine immediately to avoid further damage Tab. 7.1.

WARRANTY INTERNATIONAL

Please refer to the generator set warranty.
INFORMATION ABOUT WARRANTY

WARRANTY NORMS EPA

KOHLER CO.

CALIFORNIA AND FEDERAL EMISSION CONTROL WARRANTY STATEMENT

YOUR WARRANTY RIGHTS AND OBLIGATIONS

The California Air Resources Board, U.S. Environmental Protection Agency ("EPA") and Kohler Co. are pleased to explain the emission control system warranty on your MY2014-2016 engine. In California ("the State") and US EPA regulated applications, new heavy-duty off-road engines must be designed, built and equipped to meet the State's and U.S EPA's stringent anti-smog standards. Kohler Co. must warrant the emission control system on your engine for the periods of time listed below provided there has been no abuse, neglect or improper maintenance of your engine.

Your emission control system may include parts such as the fuel injection system and the air induction system. Also included may be hoses, belts, connectors and other emission-related assemblies.

Where a warrantable condition exists, Kohler Co. will repair your heavy-duty off-road engine at no cost to you including diagnosis, parts and labor.

MANUFACTURER'S WARRANTY COVERAGE

The MY2014-2016 heavy-duty off-road engines are warranted for the periods listed below. If any emission-related part on your engine is defective, the part will be repaired or replaced by Kohler Co.

**MY2014-2016 KD, KDW AND ALL TPEM ENGINES**

OWNER'S WARRANTY RESPONSIBILITIES

1. As the off-road engine owner, you are responsible for the performance of the required maintenance listed in your owner's manual. Kohler Co. recommends that you retain all receipts covering maintenance on your off-road engine, but Kohler Co. cannot deny warranty solely for the lack of receipts or for your failure to ensure the performance of all scheduled maintenance.
2. As the off-road engine owner, you should however be aware that Kohler Co. may deny you warranty coverage if your off-road engine or a part has failed due to abuse, neglect, improper maintenance or unapproved modifications.
3. Your engine is designed to operate on diesel fuel only. Use of any other fuel may result in your engine no longer operating in compliance with California's emissions requirements.
4. You are responsible for initiating the warranty process. The ARB suggests that you present your off-road engine to a Kohler Co. dealer as soon as a problem exists. The warranty repairs should be completed by the dealer as expeditiously as possible.

If you have any questions regarding your warranty rights and responsibilities, you should contact Kohler Co., by visiting [www.kohlerengines.com](http://www.kohlerengines.com) or telephone 1-800-544-2444 (U.S.A. and Canada).
INFORMATION ABOUT WARRANTY

**COVERAGE**

Kohler Co. will repair or replace emission control system parts, components and sub-assemblies found to be defective with respect to materials or workmanship at no cost to you including engine exhaust system related diagnosis, labor and parts. The choice and responsibility of the decision to repair or replace an emission control system defect will be solely that of Kohler Co. Emission control system parts/ components covered by the Federal and California Emission Control Systems Limited Warranty are listed below:

- Fuel injector(s)
- Injection pump(s)
- Exhaust manifold
- Intake manifold
- Exhaust gas recirculation (EGR) tube
- Crankcase ventilation valve
- Electronic control unit (ECU) if equipped
- Sensors associated with ECU operation
- Emission control information labels
- Turbocharger (if equipped)
- Fuel limiting device

Parts/components that are scheduled to be replaced as part of the required maintenance schedule will be covered under the warranty provisions for a period of time up to the first scheduled replacement point for the subject parts/ components. Subsequent damage to other engine components as a direct result of a warrantable failure an exhaust emission part/ component will be covered under the warranty provisions described herein.

As the heavy-duty off-road engine owner, you should however be aware that Kohler may deny you warranty coverage if your heavy-duty off-road engine or a part has failed due to abuse, neglect, improper maintenance or unapproved modifications. Only due to the above reasons, the manufacturer may deny the warranty coverage.
<p>| <strong>A</strong> | Authorised workshop: | Kohler authorised service centre. |
| <strong>B</strong> | Bore: | Internal diameter of the cylinder in combustion engines. |
| <strong>C</strong> | Catalyst: | A device in charge of filtering exhausted gas. |
| <strong>Combustion:</strong> | Chemical reaction of a mixture composed of fuel and fuel (air) inside a combustion chamber. |
| <strong>Common Rail:</strong> | A high-pressure &quot;Common Duct&quot; that produces a constant supply of fuel directly to the injectors. |
| <strong>D</strong> | EC: | European Community. |
| <strong>ECU:</strong> | Electronic Control Unit; an electronic device in charge of electronically detecting and controlling other electronic control devices. |
| <strong>Electronic injector:</strong> | An electronically activated component able to inject jets of atomised fuel inside the cylinders. |
| <strong>EPA:</strong> | Environmental Protection Agency. The United States' authority that safeguards the environment; its duty is to govern and control polluting emissions. |
| <strong>E</strong> | Fig.: | Figure. |
| <strong>Galvanised:</strong> | Material that has undergone surface protection treatment. |
| <strong>H</strong> | Heavy conditions: | Type of extreme condition referred to the work environment in which the engine is used (very dusty - dirty area, or in a contaminated environment due to various types of gas). |
| <strong>K</strong> | KDI: | Kohler Direct Injection |
| <strong>L</strong> | LUBRICITY DOSER: | Device that adds lubricant to the fuel |
| <strong>M</strong> | Maintenance - periodic: | A group of maintenance actions that have the sole objective to control and replace elements on their expiry, without modifying or improving the functions carried out by the system, neither increasing the value nor improving performance. |
| <strong>MAX:</strong> | Maximum. |
| <strong>Methyl ester</strong> | It is a mixture of products by means of a chemical conversion of oils and animal and/or vegetable fat, which is used to produce Biofuel. |
| <strong>MIL:</strong> | Malfunction Indicator Lamp |
| <strong>Min.:</strong> | Minutes. |
| <strong>MIN:</strong> | Minimum. |
| <strong>Model:</strong> | Model, engine identification plate, which indicates the engine's model. |
| <strong>O</strong> | Oil Cooler: | Small radiator used to cool the oil. |
| <strong>P</strong> | Par.: | Paragraph. |
| <strong>Paraffin:</strong> | Fatty and solid substance that may form inside the diesel. |
| <strong>PWM:</strong> | Pulse Width Modulation&quot; is a digital signal sent from the EGR valve to the EGR-ECU, which interprets the position of the valve. |
| <strong>R</strong> | Ref.: | Reference. |
| <strong>S</strong> | s/n: | Serial number (engine identification name plate) indicating the engine identification series/chassis number. |</p>
